PNAAs would like to thank our Corporate Sponsors for their generous support of our efforts. Visit their web sites to learn more about their companies and the services they offer.

MOSS ADAMS LLP

Moss Adams LLP provides accounting, tax and consulting services to public and private middle-market enterprises in many different industries.

The largest Industry Group served is manufacturing with a significant emphasis on aerospace companies in the Pacific Northwest. Founded in 1913, and headquartered in Seattle, Washington, Moss Adams has offices in Washington, Oregon, California, and New Mexico. Click on Moss Adams's logo to learn more.

The Consulate General of Canada, Seattle is the Canadian federal government's Trade and Political presence in the Pacific NW. Our team works hard to facilitate cross border trade, investment and innovation exchange. Through our extensive network of 260 offices in 150 countries and 17 offices within Canada, we are exposed to many of Canada's finest aerospace companies and technologies. We are committed to leverage our department's international innovation network to build Science and Technology partnerships through technology collaboration, diffusion and commercialization. Aerospace and Defense are two of the top priorities for our office. We facilitate partnering with Canadian firms for both the PNW market and for third markets across the globe. Washington State

Innovation is in our nature.

The Washington State Department Commerce (formerly CTED) invests in Washington's communities, businesses, and families to build a healthy and prosperous future. They provide technical and financial assistance to communities and businesses to help them grow and prosper. According to CTED, Washington State is "the center of one of the world's largest aerospace manufacturing clusters." Click on the Department's logo to learn more.

The Washington State Community and Technical Colleges sponsors 11 Centers of Excellence. As a designated Center of Excellence, The Center of Excellence for Aerospace and Advanced Materials Processing offers the state's technical and community colleges a single and reliable source for industry information and education, and strives to place a highly-skilled workforce within the advanced manufacturing industry. A partnership between

Everett and Edmonds community colleges, The Center of Excellence for Aerospace and Advanced Materials Processing offers students, business leaders and instructors working in the field of advanced materials science and processing a focal point for customized training and services. The Center of Excellence is committed to working with industry leaders to develop customized programs critical to training current and future workers. Click on the Center of Excellence's logo to learn more.

Acuity is the engineering technologies partner to aerospace companies in the western US. Our focus is improving operation efficiencies in companies with complex process, product and compliance requirements. Click on Acuity's logo to learn more.

CDG has established a strong reputation spanning 40 years as a leader in engineering-driven technical services for aviation, aerospace, defense and other complex engineering and manufacturing environments. CDG specializes in helping engineering-focused organizations maximize efficiency through: Engineering Design Services; Engineering Data Conversion Services – 2D to 3D, 3D to 2D, scanned image raster to vector conversions; Technical Publications – Including expertise in S1000D, ATA iSpec2200 and other technical standards; Digital Imaging Services – paper, aperture cards, microfilm/microfiche, engineering drawings, blueprints, other large format drawings; and Advanced Content Management Solutions – Including Interactive Electronic Technical Manual (IETM) solutions. CDG's strength comes from its ability to support customers with: Expertise – a global talent pool including hundreds of engineers and technical specialists; Delivery – advanced tools and services to produce and deliver virtually every type of information, ranging from simple documents to complex engineering data; Security – with stringent facility security measures and screened personnel, CDG is a trusted partner for handling sensitive and confidential information, supporting both commercial and military environments; Quality – operations fully committed to Lean practices and ISO 9001:2008 certified quality management systems in place to ensure the highest standards for efficiency, accuracy, and data integrity; Compliance – in-depth knowledge of industry standards and assured compliance with ITARS and other government regulatory requirements; Stability – as a subsidiary of The Boeing Company, CDG offers its customers assurance of financial stability and a solid history of proven experience in handling high volume, complex projects.
